## Summary

Computer Science graduate (B.Tech CSE, graduating 2026) with hands-on experience designing, implementing, and automating build and release infrastructure, CI/CD pipelines, and large-scale cloud infrastructure on AWS and Kubernetes (Linux-based). Proficient in Python for automation and tooling, with a track record of improving availability, scalability, security, and performance across production systems. AWS Well-Architected certified.

## Education

### Sister Nivedita University

B.Tech in Computer Science & Engineering; CGPA: 9.1/10

2022 – 2026

India

## Experience

### Project Associate – AI Image & LiDAR Annotation

May 2026 – Present

RT Network Solutions Pvt. Ltd.

India

- Validated and QA'd image and LiDAR point-cloud datasets for computer-vision and autonomous-perception ML pipelines, sustaining **97%+** labeling accuracy against strict annotation specifications.
- Cut mislabeled-object rate by **18%** by designing and running systematic QA review cycles, directly improving downstream model training accuracy.
- Partnered with data science and engineering teams to streamline annotation workflows and tooling, reducing per-batch turnaround time by **20%**.
- Documented annotation standards and enforced data-handling/privacy controls across **10+** concurrent datasets and projects.

## Projects

### Aegis Stack | [GitHub](#)

AWS, Terraform, EKS, Istio, Vault, OPA, Falco, Prometheus

- Designed and implemented a security-first CI/CD pipeline (GitHub Actions + Tekton) automating the full build-and-release process – scanning (Trivy), SBOM generation (Syft), signing (Cosign), and policy-gating (OPA/Conftest) container images before deployment.
- Automated provisioning of large-scale AWS infrastructure with Terraform, including a private EKS cluster, VPC network design, KMS encryption, and IAM roles for service accounts (IRSA), improving security and availability across environments.
- Implemented runtime threat detection (Falco, Kyverno) and zero-trust service-to-service communication (Istio mTLS, HA Vault) to improve the security and reliability of distributed systems at scale.

### RoutineOps | [GitHub](#)

AWS, Terraform, Docker, Kubernetes, Jenkins, Prometheus

- Designed and automated build and release infrastructure for containerized microservices, implementing CI/CD pipelines with Jenkins and GitHub Actions to reduce manual deployment effort by **30%**.
- Automated provisioning of scalable AWS infrastructure with Terraform and deployed distributed services to Kubernetes, improving deployment consistency and system availability.
- Implemented Prometheus/Grafana monitoring and alerting to improve visibility into performance, efficiency, and availability of production infrastructure.

### PodPlate Platform | [GitHub](#)

Docker, Kubernetes, Istio, GitOps

- Built a distributed, self-healing microservices platform on Kubernetes with an Istio service mesh, improving fault tolerance and service-to-service reliability at scale.
- Automated deployments through GitOps-based CI/CD workflows and implemented horizontal auto-scaling to improve availability under variable load.
- Instrumented a full observability stack to monitor performance, capacity, and reliability across the distributed system.

## Technical Skills

**Programming:** Python, Bash, C++(Basic)

**Operating Systems:** Linux/Unix (Ubuntu, Amazon Linux)

**CI/CD & Build/Release Automation:** GitHub Actions, Jenkins, Tekton, GitOps

**Large-Scale Infrastructure (AWS):** EC2, EKS, VPC, IAM, KMS, S3, DynamoDB

**Infrastructure as Code:** Terraform, Ansible

**Distributed Systems & Containers:** Docker, Kubernetes, Istio

**Monitoring & Observability:** Prometheus, Grafana, CloudWatch

**Security:** IAM, KMS, Vault, OPA/Gatekeeper, Kyverno, Falco, Istio (mTLS)

**Version Control:** Git, GitHub
