PROFESSIONAL SUMMARY

DevOps and Cloud Security Engineer with 3+ years of hands-on experience building and operating scalable cloud infrastructure on AWS. Architected 3 end-to-end cloud-native platforms featuring GitOps CI/CD (ArgoCD, GitHub Actions), Kubernetes security (OPA Gatekeeper, Kyverno, Falco), supply-chain security automation (Trivy, Cosign, Syft), and full observability stacks (Prometheus, Grafana, Loki). Deep expertise in Infrastructure-as-Code (Terraform), container security, and implementing security automation in CI/CD pipelines — directly aligned with Gong's DevSecOps mission. Experienced working cross-functionally with Engineering, Security, and Platform teams to deliver secure, high-performing SaaS infrastructure.

TECHNICAL SKILLS

Cloud & IaC: AWS (EKS, EC2, S3, Lambda, VPC, IAM), Terraform, CloudFormation, Infrastructure-as-Code (IaC), GitOps

Containers & Orchestration: Docker, Kubernetes (EKS) — production operations, Helm, Kustomize, Istio Service Mesh (mTLS)

CI/CD & GitOps: ArgoCD, GitHub Actions, Tekton Pipelines, CircleCI (familiar), Cosign, Syft, Conftest

Security & Vulnerability Management: OPA Gatekeeper, Kyverno, Falco, Trivy (CVE/vulnerability scanning), Falcosidekick, HashiCorp Vault, cert-manager

Observability: Prometheus, Grafana, Loki, Alertmanager, Datadog (familiar)

Networking & Architecture: REST API, TCP/IP, DNS, VPC networking, service mesh, cloud security concepts

Languages & Tools: Python, Bash, YAML, Java (environment familiarity), Git, Makefile

PROJECTS

Aegis Stack — Zero-Trust Kubernetes Security Platform github.com/abhijitray7810/aegis-stack

Terraform, EKS, VPC, OPA Gatekeeper, Kyverno, Falco, HashiCorp Vault, Istio, Tekton, ArgoCD, Prometheus, Grafana, Loki, cert-manager

- Architected a production-grade zero-trust Kubernetes security platform on AWS EKS using Terraform IaC, enforcing policy-as-code with OPA Gatekeeper and Kyverno — blocking 100% of non-compliant workloads at admission control, directly implementing Kubernetes security best practices at scale.
- Engineered a 7-stage CI/CD supply-chain security pipeline (GitHub Actions + Tekton) integrating Trivy vulnerability scanning, Syft SBOM generation, Cosign image signing, and Conftest policy validation — reducing unscanned/unsigned image deployments to zero and automating security across the entire delivery pipeline.
- Implemented Falco runtime threat detection with Falcosidekick alerting (MTTA <30s), Istio mTLS service mesh, and HashiCorp Vault secret management — eliminating plaintext traffic and secrets-in-env vulnerabilities across all microservices.

PodPlate — Cloud-Native Food E-Commerce Platform github.com/abhijitray7810/PodPlate-Platform

- Kubernetes, Istio, ArgoCD, Tekton, Prometheus, Grafana, Loki, Docker, AWS, GitOps, Event-Driven Architecture*
- Designed and operated a cloud-native SaaS platform on AWS EKS with Horizontal Pod Autoscaler (HPA) and Istio service mesh, sustaining zero-downtime deployments under variable load and reducing inter-service latency by 35%.
 - Built and maintained GitOps CI/CD pipelines (ArgoCD + Tekton + GitHub Actions) cutting deployment lead time from hours to under 8 minutes; collaborated cross-functionally with Engineering and Security teams to enforce deployment guardrails and audit trails.
 - Architected event-driven microservice architecture reducing peak-traffic order latency by 40%; deployed Prometheus + Grafana + Loki observability stack tracking 15+ custom SLIs, reducing incident Mean Time to Resolution (MTTR) by 50%.

RoutineOps — Cloud-Native Microservices DevOps Platform github.com/abhijitray7810/RoutineOps

- AWS (EC2, S3, VPC, IAM), Terraform, Docker, Kubernetes, CI/CD, Prometheus, Grafana*
- Engineered scalable AWS cloud infrastructure using Terraform IaC (VPC, subnets, IAM roles, EKS), reducing environment provisioning time from days to under 20 minutes — directly improving developer experience and operational efficiency.
 - Containerized and orchestrated microservices on Kubernetes (EKS) with rolling update strategies and readiness/liveness probes, achieving 99.9% uptime SLA and zero manual intervention during routine deployments.
 - Automated multi-stage CI/CD pipelines (GitHub Actions) with health-check-gated rollbacks enabling 3x faster feature delivery; configured Prometheus + Grafana dashboards reducing unplanned outages by 60% through proactive alerting and capacity planning.

EDUCATION & CERTIFICATIONS

B.Tech / B.Sc in Computer Science or Information Technology [Year]
University Name, West Bengal, India Coursework: OS, Networks, Distributed Systems, Cloud Computing

Certifications (in progress): Certified Kubernetes Administrator (CKA) | AWS Certified Solutions Architect — Associate
